<Instruktionen zur Befüllung>

* WICHTIG! Benutzen Sie professionelle Folienballonarmaturen.

* Automatische Folienballonarmaturen befüllen die Ballons mit perfektem Druck um die gewünschte Größe zu erreichen.

* Befüllen Sie die IBREX-Balloons nicht zu groß oder mit viel Druck, da dann die empfindliche Barriere Folie beschädigt werden kann.

<Ballon Service>

* Ein Folienballon wird bei kalter Luft kleiner. Sobald Sie dann wieder in wärmere Luft kommen, wird der Ballon dann wieder die ursprüngliche Größe annehmen.

* Setzen Sie Folienballons keiner extremen Hitze aus, da sie dann platzen würden.

* ibrex™-ballonnen hebben verbazingwekkende zweeftijden. Ze blijven meer dan 30 dagen zweven en behouden 30 dagen hun vorm ! ! Het betekent dat je helium kan besparen en goed zijn voor het milieu!

<Hoe opblazen ?>

* Belangrijk: gebruik alleen een ontspanner voor folie !

* Gebruik geen latex ontspanner om Ibrex ballonnen op te blazen !

* Een folie-ontspanner blaast automatisch de Ibrex ballonnen op met de juiste druk tot de juiste maat.

* Blaas de ballon niet te groot op : bij hoge druk wordt de structuur van de Ibrex-ballonnen gebroken en werkt de High Performance Barrier niet.

<Zorg voor de ballon>

* Een folieballon kan leeggelopen lijken in koude lucht, maar zal zich hersstellen als hij in een warmere omgeving komt.

* Stel folieballonnen dus niet aan extreme hitte bloot want daar zijn ze uiteraard niet tegen bestand

* Laat geen met helium gevulde folieballonnen buitenhuis los, omdat ze stroomuitval kunnen veroorzaken als ze een hoogspanningslijn raken .

* Folieballonnen zijn niet biologisch afbreekbaar

Three-Point 29.

29" 0201 31 7601

[Cautions in handling the Three-Point balloon]

(1) Cautions when connecting balloons *When connecting 3 balloons

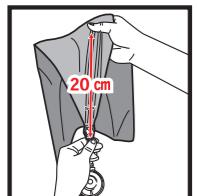

As shown in the figure, align the balloons so that the connecting points (film valves) are aligned and piled on top of each other.

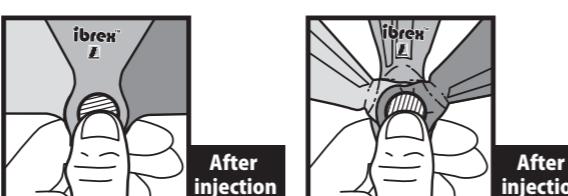

Be careful not to have two connecting points (film valves) as shown in the figure, otherwise it won't be possible to inject gas.

The above cautions apply before injecting gas. After injecting the gas, it is not a problem if two or more connecting points (film valves) are placed on top of each other.

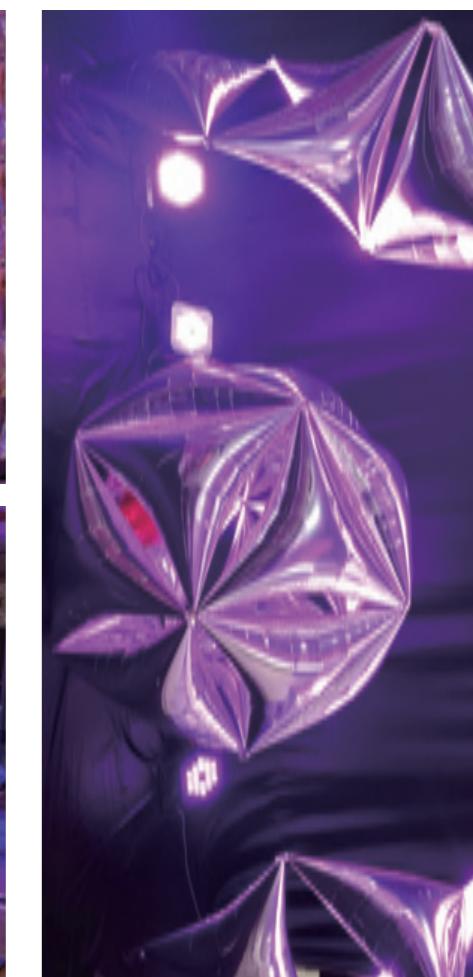

(2) How to inject gas with the precision inflator (low-pressure injection device)

When injecting gas with the precision inflator (low-pressure injection device), pull upwards while holding them approximately 20 cm away from the inlet (film valve) as shown in the figure.

Forcefully push down on the polyolefin (double-sided tape) as shown in the figure to prevent the connecting point from detaching.

Tips for inflation

- If the Left-Right Balance of Aqua was lost when you inflate, Please inflate up to maximum size and then deflate to your size. It will improve this issue.
- The barrier characteristics of helium gas in the Aqua Balloon are no different from those in rubber balloons. If inserting a rubber balloon into the Aqua Balloon and floating for a long time, please use HIFLOAT®.

The Upright Balloon is a revolutionary new shape of balloon can be stood itself simply by inserting a stick or straw and inflated by air. Since it doesn't require a separate "cup" as in conventional air filled balloons, work efficiency is dramatically improved!
